Advanced Administration Configure Apache Web Server settings in a structured way. Create profiles for different website configurations Create test sites for common configuration problems Browse and modify settings Customize preferences for an individual Apache Web Server Apache Admin Requirements: Server Operating System: Windows XP Service Pack 2 or higher Processor: Pentium-compatible processor running at a minimum of 266-MHz RAM: 512 MB or higher Hard Disk: 2 GB or higher Screen Resolution: 1280 x 1024 Microsoft.NET Framework: 3.5 Sun Java: JRE 1.6.0 Apache Admin Screenshots: User reviews For Apache Admin 2.0 - Microsoft.NET Framework v3.5 Description: Apache Admin 2.0 is an easy-to-use, yet powerful, tool to tune your Apache Web Server. It takes out the error-prone and tedious editing of text files in configuring your Apache web server, and makes it a breeze to configure your Apache web server. Perfect for both novice administrators and seasoned veterans alike, Apache Admin makes configuring and tuning your web server a breeze, all from the comfort of your Windows desktop. Advanced Administration Configure Apache Web Server settings in a structured way. Create profiles for different website configurations Create test sites for common configuration problems Browse and modify settings Customize preferences for an individual Apache Web Server Apache Admin is a cost-effective software solution for web developers and administrators. It is specifically designed for the advanced user who requires a web server configuration tool that can be used to make adjustments to the Apache Web Server, and manage the Apache Web Server settings. Apache Admin is a great solution for web developers and administrators who are unfamiliar with the GUI-based Web Server configuration tools such as cPanel, DirectAdmin or Plesk. Apache Admin is compatible with Apache 2.2.x and above, and is available for both 32-bit and 64-bit environments. Apache Admin Features: Create profiles for

What's New In?

Apache Admin is a Linux based GUI tool for tuning your Apache Web Server. It is an easy-to-use tool for Apache administrators to perform task like HTTP, HTTPS, CGI and PHP Configuration. The main purpose of Apache Admin is to make your web server a nimble and tuned one. It provides an easy way to do this by eliminating the need to edit the text files in /etc/apache2/httpl.conf and other config files. Instead Apache Admin intelligently understands and makes recommendations based on the current settings of your Apache web server and provides you with this information in a convenient way. System Requirements: Supported OS Windows Vista/7/8/10 Language English File Size 18.7MB Compatible with Windows OS Apache Admin is not compatible with any other products. Includes: Apache Admin Apache Admin and Support CD Apache Admin Quick Start Guide Apache Admin Quick Start Guide For Dummies Validate apache admin Apache Admin is licensed to you Language English File Size 18.7MB Compatible with Windows OS Apache Admin is not compatible with any other products. Install Apache Admin provides a lot of functionality, but can be difficult to install and configure without using the included guides. We strongly suggest you to read the included guides before installing the application. If you have the time, just skip this and use the CD. Installation The installation of Apache Admin is simple, but as the program is still in beta it will have a few quirks. Unzip the file in any convenient directory Copy the files from the Apache Admin package to the installation directory of your Apache web server. Start the server. This is as simple as that! After you started the server, open a new browser and point to the URL: Configure Apache Admin 1 Open the admin application by clicking on the shortcut for apacheadmin in the Start Menu 2 Click on Configure 3 Under Access, select the options you wish to be shown. 4 Click Apply Configure Apache Admin 1 Open the admin application by clicking on the shortcut for apacheadmin in the Start Menu 2 Click on Configure 3 Under Access, select the options you wish to be shown. 4 Click Apply Apache Admin Configuration General Language English Quick Start Guide Apache Admin - Quick Start Guide For Dummies Validate apache admin Validate apache admin This is a test to

System Requirements For Apache Admin:

Windows 7 and later Processor: 1.0 GHz Dual Core or higher Memory: 1 GB RAM Graphics: Shader Model 3.0 or higher DirectX: Version 9.0c or later Hard Drive Space: 20 GB NOTE: An internet connection is required to install the game. You can pick it up for \$20 off its regular price of \$24.99 here. **Kombat on Kong** is the latest game to hit the service, and is designed to be played with a copy of Dance Central
